**Chapel Screensaver**

**Basic Title Slide**

**Customised Title Slide**

**Customised End Slide**

**Full photo editing**

## Planning the slideshow

### What is a Chapel Screensaver?

The chapel screensaver is a still photo that is displayed during the service, and is situated at the beginning of the video. When it is time to play the slideshow, the audio attendant will start the video. At the end of the slideshow, this same screensaver will display for the remainder of the service.

### Title Slide

This marks the start of the slideshow. Bronze slideshows have a simple, basic title slide. Silver & Gold slideshows will have customised titles slides with photos & additional graphics.

### Photo Editing

All photos provided are touched up with editing software. Photo edits for Bronze slideshows are limited to simple amendments such as cropping borders. Photos for Silver & Gold slideshows are fully edited for maximum quality including fixing age spots, overexposures, rips/tears, & red eye reduction. We can even eliminate other people, structures & backgrounds out of photos (subject to our review of the photo).

### Photos

We recommend allowing each photo to display on its own, rather than doubling up photos. Photos smaller than business card size in hardcopy will start to pixelate on the screen. If scanning your own photos, ensure your scanner is free of dust and marks. Scan your photos at 300dpi for maximum quality & if you have the option of automatic cropping to photo size, please enable this function (check the Settings on your scanner software).

### What are Transitions & Animations?

Transitions are the function of moving from one photo to the next. We normally use a cross-fade transition, which gives the slideshow a soft look, however we do have others to choose from. Animations are the function that provide zoom & pan elements to each photo, giving the photos movement. Bronze slideshows only have transitions, Silver & Gold have both.

### Music

The length of music you choose will dictate the amount of photos that are in the slideshow. The general rule is approximately 10 photos for every minute of music. So a 5 minute song will have maximum of 50-55 photos. This measurement ensures that photos stay on the screen long enough to be engaged in full by the viewer. You can have more than 1 song for your slideshow; in this case, we will overlap the end/start of the 2 songs to ensure there is no pause in the middle.

### End Slide

This marks the end of the slideshow. Bronze slideshows have a simple, slow fade out on the very last photo. Silver & Gold slideshows can also have this slow fade out but also have the option of having a customised slide with photos, text & additional graphics.
